Dear Hiring Team,

I am excited to apply for the AI/ML Engineer (Python + CrewAI) opportunity at Deloitte. With 3 years of experience in backend engineering and enterprise platform development, along with hands-on experience in Generative AI and AI orchestration workflows, I believe my background aligns strongly with the role requirements.

In my current role at Pragma Edge Software Services, I have been responsible for designing and developing scalable backend systems, REST APIs, ETL/EDI pipelines, and distributed integration platforms using Python, FastAPI, Flask, Kafka, PostgreSQL, Oracle, Redis, and Linux-based deployments. My experience includes building enterprise monitoring platforms, workflow automation systems, and AI-enabled operational solutions across distributed enterprise environments.

Alongside backend engineering, I have worked extensively on Generative AI integrations and intelligent workflow systems. I have built RAG-based pipelines using LangChain, Qdrant, FAISS, and vector search techniques to enable contextual AI responses and semantic retrieval workflows. I have also developed AI orchestration solutions using LangChain, LangGraph, and CrewAI for multi-agent workflows, ticket classification, incident correlation, SOP recommendation, and intelligent automation.

Additionally, I have experience integrating LLM providers including OpenAI, Anthropic Claude, Google Gemini, Ollama, and IBM watsonx into production-ready backend systems through secure REST APIs and structured prompt workflows. My work also includes MCP-compatible AI services, conversational AI workflows, anomaly detection systems, and AI-assisted operational platforms.

What excites me most about Deloitte is the opportunity to contribute to enterprise-scale AI solutions while collaborating on solutioning, PoCs, and intelligent automation initiatives. I am particularly interested in roles involving AI orchestration, GenAI-powered enterprise workflows, and scalable backend AI systems.

I would welcome the opportunity to discuss how my backend engineering and GenAI experience can contribute to your team. Thank you for your time and consideration.
